Avid NEXIS disaster recovery and ransomware protection

Mitigating the impact of a \$1M
ransomware attack on an Avid facility

The business threat ...

marquis

- Dramatic rise in ransomware attacks
- Attackers are targeting media and entertainment
 - Recent attacks at well run and well-resourced companies - public knowledge
 - Increasing attacks at smaller organisations such as post houses - not public knowledge
- Common theme is destruction of backup systems, so the loss can be total
- Potential cost of the outage is huge - a threat to the business
- Many organisations are paying ransoms to save their business

**Organisations should understand it is not a case
of *if* there is a successful attack, but *when***

Last week.....

Telemadrid sufre un ciberataque que bloquea sus sistemas y le obliga a emitir de forma "manual"

20MINUTOS / NOTICIA / 06.10.2023 - 11:03H

- El departamento técnico detectó de madrugada que se había producido un ataque y se apagaron los ordenadores.
- "Ave María Purísima, quiero poner una antena en su tejado", o cómo fueron los inicios de 'Madrid Directo'.

Archivo - Imagen de recurso de la sede de Telemadrid. / TELEMADRID - Archivo

La televisión pública madrileña, **Telemadrid**, ha sufrido un ciberataque durante la madrugada que **ha bloqueado todos sus sistemas informáticos**, algo que ha afectado tanto a la emisión como al trabajo del personal.

El departamento técnico **detectó de madrugada que se había producido un ataque** y por seguridad se procedió a apagar todos los equipos informáticos de la cadena, lo que afectó a la emisión.

What if this is you ?

Day 1 - Business as usual

marquis

- Welcome to 'First Class Post', we're super busy !
 - Pitching on major new productions
 - Soo much work after the drought caused by industrial action
 - Ingesting 10TB a day into Nexis
 - Keeping productions with tight deliveries on track
 - Some productions have been in post for many weeks
 - Looking to grow with new investors
- Staff doing really well, clients are happy
- Avid production systems working well
- Place is a buzz

'The First Class
Post Company'

Day 2 - No in-house IT or production systems are working

marquis

- We have a major systems outage, the technical team are trying to understand what has happened
- Our large Avid NEXIS and its backup are unavailable
- Can't log into on prem systems
- Can't make today's production deliveries, clients on phone
- Don't want to tell clients about the outage, concerned they will walk

'The First Class Post Company'

Day 3 - Business consequences become clearer

marquis

- We receive a ransomware demand of \$1M in Bitcoin
- All NEXIS workspaces are encrypted
- Our databases are encrypted and SSO doesn't work
- Rumours of the ransomware attack spread through freelance community and reach other facilities
- Reach out to our insurance company
- Call emergency board meeting

'The First Class Post Company'

Day 4 - Awful situation

marquis

- The conventional back-up software wrote encrypted NEXIS files to the backup = it's irrecoverable
- We're going to default on deliveries, contracts and face a major cashflow problem
- Ask bank about potential loan for ransomware payment
- No guarantee if payment is made that systems will be recovered
- The insurance policy only covers equipment recovery and system restoration, and excludes ransomware
- We're going to have to call our clients and explain

'The First Class Post Company'

- Day 5 - It's an awful situation;
do we pay the \$1M ransom?

marquis

'The First Class
Post Company'

- Day 5 - It's an awful situation;
do we pay the \$1M ransom?

marquis

'The First Class
Post Company'

So what would you do?

What did we learn?

marquis

- Our IT systems didn't protect us
- Our insurance didn't cover us
- Our cashflow has been immediately impacted
- The most valuable and business-critical assets were on Avid NEXIS
- Had there been a better way to protect the Avid work in progress, the business could have recovered productions
- We can't resume key productions without major delays
- We weren't prepared for the consequences
- We should have acted earlier to plan and mitigate the risk
- Our backup software and storage technology has been obsoleted by ransomware

'The First Class Post Company'

Example attacks

marquis

- Major US broadcaster
 - Encrypted SSO database and backup meant Sys Admins could not access any systems to devastating cost
- Americas broadcaster
 - Massive attack - Irrecoverably lost Several Avid Nexis systems and back up totalling 1.5PB
- European Broadcaster
 - Suffered major attack. 2PB Tape library database (and back up) encrypted
 - All references tape id's slots indexes irrecoverably lost
- European Documentary producer
 - Partially successful attack able to recover, content excluded from insurance policy
- North American VFX Co
 - Paid undisclosed amount - thought to have been in \$Ms range

Example attack vectors

marquis

- Classic Modes

- Phishing
- Remote Desktop Protocol
- Removable Media

- Human Factors

- Incompetence and wilful ignorance
 - Including 'blind faith' in existing DR systems
- 'Recruit to inject' via LinkedIn research
- 'Fee to insert' via Dark Web self promotion

- Geo Political Factors

- Un-decryptable attacks

Why act early with Marquis ...?

The Marquis logo is displayed in a bold, white, sans-serif font. It is positioned in the upper right corner of the slide, set against a background of abstract digital patterns and light streaks in shades of blue and red.

- **Marquis software offers unique Avid NEXIS back-up protection and recovery**
 - Uses **smart analytics** to scan Avid NEXIS systems
 - Uses the analytics data to enable a **uniquely safe** approach to NEXIS back up and recovery
 - It will **not write** encrypted media files to back up
 - Has '**no prior knowledge**' recovery tools to recover from the NEXIS back up following a complete facility loss
 - Can restore productions the **same day** - not in weeks or months
 - **Free recovery tools** will directly and securely restore from the Marquis back-up
 - Avid projects **directly to Media Composer** - for the most urgent work
 - Avid **workspaces** to NEXIS
 - Can **blend recovery strategies** between on-prem and in-cloud storage
 - **Mitigates against** uninsurable **loss and survival** of the business

marquis

Workspace Backup

Avid storage disaster recovery
and ransomware protection

Conventional DR Solutions

marquis

- Backup

- No analysis of the source NEXIS system
 - No understanding of how Avid media and projects work
- Blindly backs up data - even if encrypted by ransomware
 - Great risk of ruining a perfectly good backup

- Restoration

- Monolithically restores data - even if encrypted by ransomware!
 - Entire system has to be recovered
 - Recovery can take weeks or months
- No way to access backup at Project or Bin level
- No flexibility in the restoration system type and location

Wouldn't it be better to...?

The Marquis logo is displayed in a bold, white, sans-serif font. It is positioned in the upper right corner of the slide, set against a background of abstract digital patterns in blue and red.

- Have a better way of handling Avid backups...

- Base the backup on a tool that understands Avid
 - Intelligently process what needs to be backed up
- Protect Avid media from Ransomware by design
 - Do not re-backup potentially corrupted media files
- Intelligently manage the contents of the backup
- Offers fast and flexible restoration options

Marquis Workspace Backup is the *only* backup solution specifically designed for Avid systems

Workspace Backup

marquis

- Analyse the source NEXIS
 - Understands the relationship between the media files and Avid projects
- Backs up all files from the source workspace
 - Only ever copies the original media file into the backup
 - Will never copy encrypted media into the backup
- Includes a version-controlled backup of Projects

Workspace Backup

marquis

- Backup to Quantum ActiveScale
 - Immutable security with object locking
 - Set retention periods per asset
- Run regular 'Tidy' operations on the backups
 - Remove assets deleted from source system after a configured retention period
- Flexible job configuration and retention policy management

Independent recovery

marquis

Workspace Backup has two independent recovery tools

- **Workspace Restore**
 - Restore at a Workspace Level
 - Restore to original workspace, or re-map the job to different/new workspace
 - Intelligent Restore
 - If the destination is empty, restore the whole workspace
 - If there is content still in the workspace, restore only the missing files
- **Project Restore**
 - Restore a chosen version of a Project, or a selection of bins from the Project
 - Restore to any location, e.g.:
 - Restore to a part of the existing system
 - Restore to a different location

Both can be used at the same time to restore the project while rebuilding the workspace.

SUMMARY

Summary

- Loss of Avid NEXIS work in progress is the **biggest risk** to the business
- An **irrecoverable ransomware** attack is likely to be an **uninsurable risk**
- The recovery you just saw, would take **weeks or months** using conventional systems
- **Workspace Backup** uses analytics to stop encrypted media files being written to back up.
- Ultra-fast, ultra-granular **Workspace Backup** recovery means production can often restart the same day with **no prior knowledge** of the ransomware encrypted facility
- Traditional disaster recovery software and storage systems
 - Are **unlikely** to protect against a ransomware attack
 - Provide extremely **poor recovery** times

Summary

- Data security is key – **#1 client priority** at the recent DPP 'Leaders Briefing' conference
- **Workspace Backup** is a really cost-effective investment that offers Avid facilities **real protection** and uniquely **fast recovery** from a ransomware attack
- It's scalable from the smallest Avid post facility to the biggest Avid enterprise
- Proven with **Quantum ActiveScale**
